ABOUT ME

I am a Full Stack web developer with an interest in building websites that are useful and practical. I like to problem solve and have often built websites that make something easier for myself. I have combined a self taught background with formal web development experience through Dev Academy NZ. My self taught journey is where I developed a large portion of my technical skills and knowledge in Full Stack development and Dev Academy is where I both built on my existing skill set and applied it to a team environment where during the bootcamp we were tasked with building group projects. My portfolio page shows more information on projects I have built.

TECH STACK / SKILLS

I am familiar with but not limited to the following software, languages, libraries and frameworks

HTML, CSS, JavaScript, TypeScript, React, NodeJS, C#, .NET, SQL, Git, GitHub, Windows OS, Linux OS.

Other Skills

- Problem Solving
- Troubleshooting and debugging errors
- Ability to learn and grow from feedback

EXPERIENCE

Dev Academy NZ (Student)

Period: 2024

Dev Academy is a five month full stack web development bootcamp where we build Full Stack web applications both solo and in a team environment. This was a very helpful experience for me because it allowed me to integrate my self taught knowledge into a team environment where I was collaborating with others and working around the typical dynamics of a team environment such as communication, adapting to different roles, supportiveness, and conflict resolution.

An example of a project I worked on at dev academy is Performance Logger (https://github.com/katuta-mwila/performance-logger).

NZ Post

Period: 2023 - 2024

At this job I worked in operations which is a role that took place in NZ Posts depot in Lower Hutt where I was tasked with sorting and scanning parcels as well as various housekeeping activities. In this role I was expected to work independently a lot of the time and it was often implied what task I should be doing at the current moment.

EDUCATION   **Dev Academy NZ**

New Zealand Level 6 Certificate, Applied Software Development
